

# Final Project Deliverables

## Systems Security Management

### Final Project Paper

The final project requires students to write a paper based on the selected scenario. This paper must conform to the following requirements:

- Cover Page with the following information
  - Scenario Title, Student Name, Course Title (Systems Security Management), Date
- Seven (7) to Eight (8) pages maximum for content
- Use Times New Roman font, 12-point, double spaced, 1 inch margins
- Paper should begin with a one (1) page executive summary
- A minimum of 5 references that must be appropriately cited in the paper with included Reference page
- Use Appendices for information tables as necessary to support your solutions
  - Note that Cover, Reference, and Appendix pages should NOT be counted in the page total (e.g. Max w/o Appendices = 8-9 pages, Max w/ Appendices = 9+)

### Final Project Presentation

In addition to a paper, each student will be required to present their findings to senior management (e.g. the class). The following are requirements for the presentation:

- This is an online course, so an actual presentation is not necessary; however, a PowerPoint you could use for a presentation ***will be required***.
- Presentation must be at least 5 - 6 slides (can be more)
- Aside from the Title slide, the first slide should cover the details of your scenario
- Your job is to convince senior management to adopt your proposed solution
- Submit final PowerPoint to Blackboard with your finished Paper
