

Help! I Cannot Login to My Server!

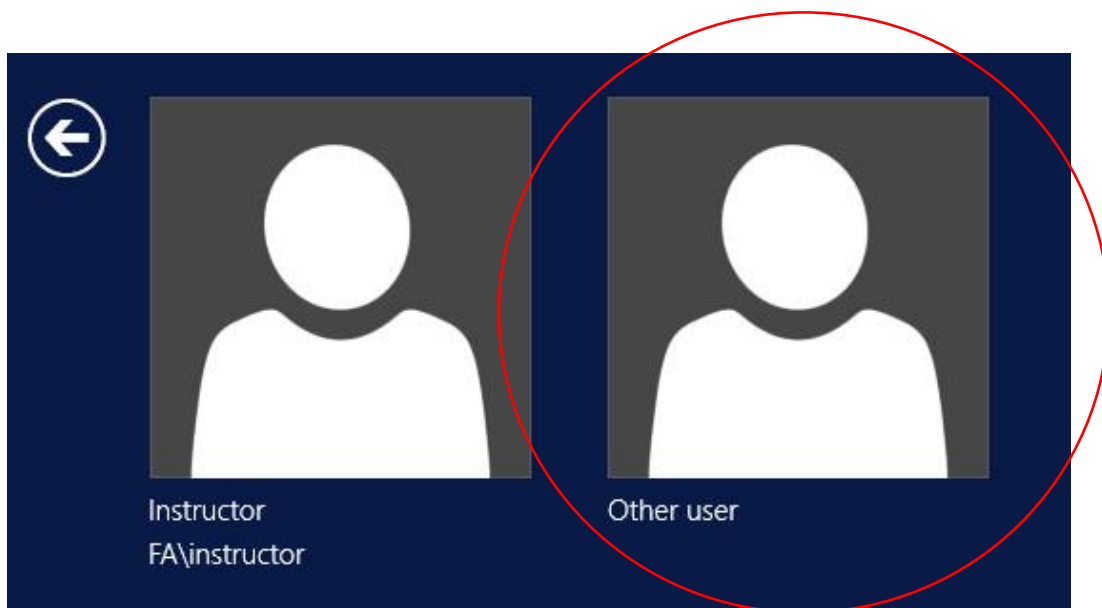

1. When you power on your server, you try to login and keep getting an error that you are unable to login with the provided credentials. The error looks like this:

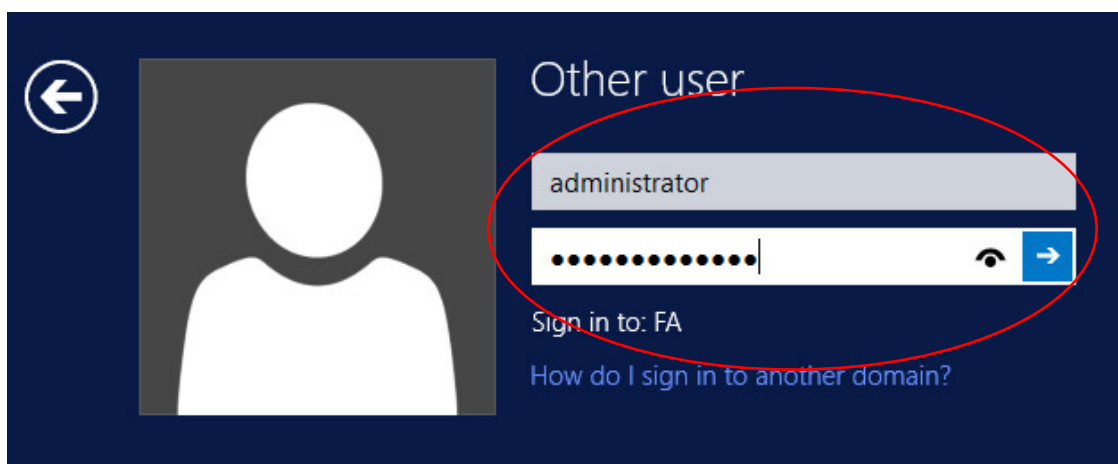

2. The problem is that you are trying to login to the Instructor's account and not your Administrator account. You will need to change the username to access the server. To do this, click on **the arrow pointing to the left**.

3. Now click on the **Other User** box.

4. Type in “administrator” (without the quotes) for the username and the password you created when you setup the server in lab 2.

5. You should now be logged in. *If you are still unable to login to your server after doing this, please contact your instructor to request your password be changed.*
